

Dear Hiring Manager at Palantir,

I am excited to apply for the Forward Deployed Software Engineer position at Palantir, where I can utilize my technical skills and experience to drive innovation and collaboration. With a strong background in software development, data integration, and analytics, I am confident that I would be an excellent fit for this role.

As a highly motivated and detail-oriented individual with a Master's in Computer Science from the University of Cincinnati, I possess a solid foundation in programming languages such as Java, Python, and C++. My experience as an Application Developer at ThoughtWorks has equipped me with the skills to engineer reliable, modular components, and boost customer experience through consistent payment reminders. I have also optimized API response time, implemented Redis Pub/Sub architecture, and reduced payment processing latency, demonstrating my ability to improve system performance and scalability.

In my previous roles, I have worked with various technologies, including Spring Boot, React, and PostgreSQL, and have experience with data visualization, machine learning, and software development lifecycle. My projects, such as GPT-From-Scratch and All-RAG-Techniques, showcase my ability to design and implement complex systems, including generative pre-trained transformers and retrieval-augmented generation pipelines.

I am particularly drawn to Palantir's commitment to innovation and collaboration, and I am excited about the opportunity to work with a talented team to integrate and analyze customer data, develop and deploy software applications, and drive business growth. I am confident that my technical skills, passion for software development, and experience working with customers would make me a valuable asset to the Palantir team.

Thank you for considering my application. I would be thrilled to discuss my qualifications further and explore how I can contribute to Palantir's mission.

Sincerely,

Supraja Srikanth
